1	Chapter 12
	The Eukaryotes: Fungi, Algae, Protozoa, and Helminths
2	Fungi
3	Fungi
4	
5	Molds
	 The fungal thallus consists of hyphae; a mass of hyphae is a mycelium.
6	Yeasts
	Unicellular fungiFission yeasts divide symmetrically
	 Budding yeasts divide asymmetrically
7	Vegetative Growth
8	Fungal Dimorphism
	 Pathogenic dimorphic fungi are yeastlike at 37°C and moldlike at 25°C
9	Asexual Reproduction
	 Conidia or conidiospores: (are asexual, non-motile spores)
10	 Asexual Reproduction Arthroconidia: (produced by segmentation of pre-existing fungal hyphae)
11	Asexual Reproduction
11	 Blastoconidia: (unit of asexual reproduction produced by budding)
12 🔲	Asexual Reproduction
	 Chlamydoconidia:(conidium that is thick-walled)
13	Asexual Reproduction
	 Sporangiospores (fungal, or algal structure producing and containing spores)
14	Sexual Reproduction
	 Three phases: Plasmogamy: Haploid donor cell nucleus (+) penetrates cytoplasm of recipient cell (-)
	 Karyogamy: + and – nuclei fuse
_	Meiosis: Diploid nucleus produces haploid nuclei (sexual spores)
15	Sexual SporesZygospore: Fusion of haploid cells produces one zygospore
16	Sexual Spores
	 Ascospore: Formed in a sac (ascus).
17 🔲	Sexual Spores
	 Basidiospore: Formed externally on a pedestal (basidium)
18	
	ZygomycotaAscomycota
	 Ascomycota Anamorphs
	 Basidiomycota
	•

19 Fungal Diseases (Mycoses)

- Systemic mycoses: Deep within body
- Subcutaneous mycoses: Beneath the skin
- Cutaneous mycoses: Affect hair, skin, and nails
- Superficial mycoses: Localized, e.g., hair shafts
- · Opportunistic mycoses: Caused by normal microbiota or environmental fungi

20 Zygomycota

- Conjugation fungi
- Coenocytic- multinucleate
- Produce sporangiospores and zygospores
 - Rhizopus, Mucor (opportunistic, systemic mycoses)

21 The Life Cycle of a Zygomycete

22 Ascomycota

- Sac fungi
- Septate
- Teleomorphic fungi
 - Produce sexual and asexual spores
- Ascospores and frequently conidiospores
 - Aspergillus (opportunistic, systemic mycosis)
 - Blastomyces dermatitidis, Histoplasma capsulatum (systemic mycoses)
 - Microsporum, Trichophyton (cutaneous mycoses)

23 The Life Cycle of an Ascomycete

24 Anamorphs

- Produce asexual spores only
 - rRNA sequencing places most in Ascomycota; a few are Basidiomycota
 - Penicillium
 - Sporothrix (subcutaneous mycosis)
 - Stachybotrys, Coccidioides, Pneumocystis (systemic mycoses)
 - Candida albicans (cutaneous mycoses)

25 Basidiomycota

- Club fungi
- Septate
- Produce basidiospores and sometimes conidiospores
 - Cryptococcus neoformans (systemic mycosis)

26 The Life Cycle of a Basidiomycete

27 Economic Effects of Fungi

- Saccharomyces cerevisiae: Bread, wine, HBV vaccine
- *Trichoderma*: Cellulase
- Taxomyces: Taxol
- Entomophaga: Biocontrol
- Paecilomyces: Kills termites
- 28
- ✓ Assume you isolated a single-celled organism that has a cell wall. How would you determine that it is a fungus and not a bacterium? 12-1
- ✓ Contrast the mechanism of conidiospore and ascospore formation. 12-2
- ✓ List the asexual and sexual spores made by Zygomycetes, Ascomycetes, and Basidiomycetes. 12-3
- ✓ Are yeasts beneficial or harmful? 12-4

•
29 Lichens
30 Lichens
 Mutualistic combination of an alga (or cyanobacterium) and fungus Alga produces and secretes carbohydrates; fungus provides holdfast
31 Three Types of Lichens
32 Lichen Thallus
33 Economic Effects of Lichens
 Dyes
 Antimicrobial (Usnea) Litmus
34
V What is the role of lichens in nature? 12-5
\checkmark What is the role of the fungus in a lichen? 12-6

- Pectin and silica cell walls
- Unicellular
- Chlorophyll *a* and *c*, carotene, xanthophylls
- Store oil
- Fossilized diatoms formed oil
- Produce domoic acid

43 Dinoflagellates

- Cellulose in plasma membrane
- Unicellular
- Chlorophyll *a* and *c*, carotene, xanthins
- Store starch
- Some are symbionts in marine animals
- Neurotoxins cause paralytic shellfish poisoning

44 🔳 Oomycota

- Water molds
- Cellulose cell walls
- Multicellular
- Chemoheterotrophic
- Produce zoospores

•

45 🔲 Oomycota

46 🔲 Oomycota

- Decomposers and plant parasites
 - Phytophthora infestans responsible for Irish potato blight
 - P. cinnamoni infects Eucalyptus
 - P. ramorum causes sudden oak death

47

- ✓ How do algae differ from bacteria? From fungi? 12-7
- ✓ List the cell wall composition and diseases caused by the following algae: diatoms, dinoflagellates, oomycotes. 12-8, 12-9

48 Protozoa

49 Protozoa

50 Characteristics of Protozoa

- Vegetative form is a trophozoite
- Asexual reproduction is by fission, budding, or schizogony (multiple fission of nucleus)
- Sexual reproduction by conjugation
- Some produce cysts

51 Medically Important Phyla of Protozoa

- Archaezoa
- Microspora
- Amoebozoa
- Apicomplexa
- Ciliophora

Euglenozoa

52 Archaezoa

- No mitochondria
- Multiple flagella
- Giardia lamblia
- Trichomonas vaginalis (no cyst stage)

53 Archaezoa

54 Microspora

- No mitochondria
- Nonmotile
- Intracellular parasites
- Nosema
- 55 🔳 Amoebozoa
 - Move by pseudopods
 - Entamoeba
 - Acanthamoeba
- 56 Apicomplexa
 - Nonmotile
 - Intracellular parasites
 - Complex life cycles
 - Plasmodium
 - Babesia
 - Cryptosporidium
 - Cyclospora

57 The Life Cycle of *Plasmodium vivax*

58 Ciliates

- Move by cilia
- Complex cells
- Balantidium coli is the only human parasite

59 Euglenozoa

- Move by flagella
- Euglenoids
 - Photoautotrophs

60 Euglenozoa

- Move by flagella
- Hemoflagellates
 - Trypanosoma spp.
 - -Sleeping sickness
 - -

61

- \checkmark Identify three differences between protozoa and animals. 12-10
- \checkmark Do protozoa have mitochondria? 12-11
- ✓ Where does *Plasmodium* undergo sexual reproduction? 12-12

✓

 \checkmark

- 62 Slime Molds
- 63 De The Life Cycle of a Cellular Slime Mold
- 64 🔳 The Life Cycle of a Plasmodial Slime Mold
- 65

 \checkmark Why are slime molds classified with amoeba and not fungi? 12-13

- ✓ ✓
- . ~
- /
- 66 Helminths
- 67 Helminths

68 Helminths (Parasitic Worms)

- Kingdom: Animalia
 - Phylum: Platyhelminthes (flatworms)
 - -Class: Trematodes (flukes)
 - -Class: Cestodes (tapeworms)
 - Phylum: Nematoda (roundworms)

69 Characteristics of Helminths

- Reduced digestive system
- Reduced nervous system
- Reduced locomotion
- Complex reproduction

70 Life Cycle of Helminths

- Monoecious (hermaphroditic)
 - Male and female reproductive systems in one animal
- Dioecious
 - Separate male and female
- Egg \rightarrow larva(e) \rightarrow adult

71

- ✓ Why are the drugs used to treat parasitic helminths often toxic to the host? 12-14
- \checkmark Of what value is the complicated life cycle of parasitic helminths? 12-15
- √
- √
- √

- 73 Trematodes, or Flukes
- 74 The Life Cycle of Trematodes
- 75 Cestodes, or Tapeworms
- 76 Human as

- 77 🔲 Humans as Intermediate Host
- 78 Nematodes
- 79 The Heartworm *Dirofilaria immitis*
- 80 Eggs Infective for Humans
- 81 Larvae Infective for Humans
- 82
- ✓ Differentiate *Paragonimus* and *Taenia*. 12-16
- ✓ What is the definitive host for *Enterobius*? 12-17
- ✓ What stage of *Dirofilaria immitis* is infectious for dogs and cats? 12-18
- ✓ You find a parasitic worm in a baby's diapers. How would you know whether it's a *Taenia* or a *Necator*? 12-19

 \checkmark

83 Arthropods as Vectors

84 Arthropods as Vectors

- May transmit diseases (vectors)
- Kingdom: Animalia
 - Phylum: Arthropoda (exoskeleton, jointed legs)
 - -Class: Insecta (6 legs)
 - -Lice, fleas, mosquitoes
 - -Class: Arachnida (8 legs)
 - -Mites and ticks

85 Arthropods as Vectors

- Mechanical transmission
- Biological transmission
 - Microbe multiplies in vector
- Definitive host
 - Microbe's sexual reproduction in vector
- 86 Arthropods as Vectors

87 Arthropods as Vectors

88

- ✓ Vectors can be divided into three major types, according to roles they play for the parasite. List the three types and a disease transmitted by each. 12-20
- ✓ Assume you see an arthropod on your arm. How will you determine whether it is a tick or a flea? 12-21
