---

---

---

---

---

---

---

---

**Introduction**

The purpose of the chapter is to:

1. Identify and describe the anatomical features of the spinal cord and spinal nerves
2. Discuss the functions of the spinal cord and spinal nerves and understand how they help maintain homeostasis in the body
3. Understand spinal reflex arcs

---

---

---

---

---

---

---

---

**Functions of the Spinal Cord**

1. Process reflexes
2. Integrate EPSPs and IPSPs
3. Conduct sensory impulses to the brain and motor impulses to effectors

---

---

---

---

---

---

---

---

## Protection of the Spinal Cord

The spinal cord is protected by:

- Bone (vertebrae)
- Connective tissue (meninges)
- Fluid (cerebrospinal fluid)

---

---

---

---

---

---

---

---

---

---

## Meninges

The meninges are composed of three layers

1. Dura mater
2. Arachnoid mater
3. Pia mater

---

---

---

---

---

---

---

---

---

---

## External Anatomy of the Spinal Cord

The spinal cord begins as an extension of the medulla oblongata at the level of the foramen magnum and terminates at the level of L2

---

---

---

---

---

---

---

---

## Sensory and Motor Processing

The internal anatomy of the spinal cord allows sensory and motor information to be processed in an organized way

---

---

---

---

---

---

---

---

---

---

---

---

## Spinal Nerves

- Spinal nerves connect the CNS to sensory receptors, muscles, and glands and are part of the peripheral nervous system
- 31 pairs of spinal nerves
- Anterior and posterior roots attach a spinal nerve to a segment of the spinal cord

---

---

---

---

---

---

---

---

## Branches of a Spinal Nerve

Shortly after passing through its intervertebral foramen a spinal nerve divides into several branches known as rami

---

---

---

---

---

---

---

---

---

---

### Dermatomes

Certain segments of the skin is supplied by spinal nerves that carry somatic sensory nerve impulses to the brain

---

---

---

---

---

---

---

---

---

---

### Spinal Cord Physiology

How does information travel in the spinal cord?

- White matter tracts conduct nerve impulses to and from the brain
- Gray matter receives and integrates incoming and outgoing information to perform spinal reflexes

Copyright © 2014 John Wiley & Sons, Inc. All rights reserved.

---

---

---

---

---

---

---

---

---

---

## Sensory and Motor Tracts

---

---

---

---

---

---

---

---

## Reflexes and Reflex Arcs

A reflex is a fast, predictable, automatic response to changes in the environment

- Reflexes help maintain homeostasis
- The spinal cord serves as the integrating center for spinal reflexes
  - Integration takes place in the gray matter of the spinal cord

---

---

---

---

---

---

---

---

## General Components of a Reflex Arc

Copyright © 2014 John Wiley & Sons, Inc. All rights reserved.

---

---

---

---

---

---

---

---

---

---

## Reflex Arcs: Vocabulary Terms

- Ipsilateral
- Contralateral
- Monosynaptic
- Polysynaptic
- Reciprocal innervation

---

---

---

---

---

---

---

---

---

---

## Stretch Reflex

Controls muscle length by causing muscle contraction

Copyright © 2014 John Wiley & Sons, Inc. All rights reserved.

---

---

---

---

---

---

---

---

---

---

## Tendon Reflex

Controls muscle tension by causing muscle relaxation

Copyright © 2014 John Wiley & Sons, Inc. All rights reserved.

---

---

---

---

---

---

---

---

## Flexor (Withdrawal) Reflex

Moves a limb to avoid injury or pain

Copyright © 2014 John Wiley & Sons, Inc. All rights reserved.

---

---

---

---

---

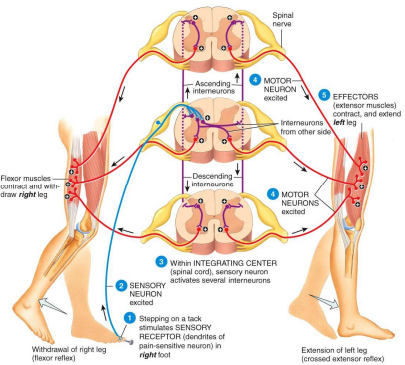

---

---

---

## Crossed-Extensor Reflex

Maintains balance

---

---

---

---

---

---

---

---

### Clinical Connection

Reflexes are often used for diagnosing disorders of the nervous system and locating injured tissue

- If a reflex is absent or abnormal, the damage may be somewhere along a particular conduction pathway

Copyright © 2014 John Wiley & Sons, Inc. All rights reserved.

---

---

---

---

---

---

---

---

### Homeostatic Imbalances

Damage that results from traumatic injuries depends on

- Degree of spinal cord section
- or
- Degree of compression of the segments involved
