**Chapter 9 Cellular Respiration**

**Section 9–1 Chemical Pathways  (pages 221–225)**

This section explains what cellular respiration is. It also describes what happens during glycolysis and describes two types of fermentation.

**Chemical Energy and Food  (page 221)**

1. What is a calorie?

2. How many calories make up 1 Calorie?

3. Cellular respiration begins with a pathway called ________________.

4. Is the following sentence true or false? Glycolysis releases a great amount of energy. ________________

**Overview of Cellular Respiration  (page 222)**

5. What is cellular respiration?

6. What is the equation for cellular respiration, using chemical formulas?

7. What would be the problem if cellular respiration took place in just one step?

8. Label the three main stages of cellular respiration on the illustration of the complete process.
9. Where does glycolysis take place? ____________________________

10. Where do the Krebs cycle and electron transport take place? ____________________________

Glycolysis (page 223)

11. What is glycolysis? ____________________________

12. How does the cell get glycolysis going? ____________________________

13. If the cell uses 2 ATP molecules at the beginning of glycolysis, how does it end up with a net gain of 2 ATP molecules? ____________________________

14. What is NAD+? ____________________________

15. What is the function of NAD+ in glycolysis? ____________________________

16. Why can glycolysis supply energy to cells when oxygen is not available? ____________________________

17. What problem does a cell have when it generates large amounts of ATP from glycolysis? ____________________________

Fermentation (pages 224–225)

18. What is fermentation? ____________________________

19. How does fermentation allow glycolysis to continue? ____________________________

20. Because fermentation does not require oxygen, it is said to be ____________________________.
21. What are the two main types of fermentation?
   a. ___________________________  b. ___________________________

22. What organisms use alcoholic fermentation? ___________________________

23. What is the equation for alcoholic fermentation after glycolysis?
   
24. What happens to the small amount of alcohol produced in alcoholic fermentation during the baking of bread? ___________________________

25. What does lactic acid fermentation convert into lactic acid? ___________________________

26. What is the equation for lactic acid fermentation after glycolysis?
   
27. During rapid exercise, how do your muscle cells produce ATP? ___________________________

---

**Reading Skill Practice**

When you read about complex topics, writing an outline can help you organize and understand the material. Outline Section 9–1 by using the headings and subheadings as topics and subtopics and then writing the most important details under each topic. Do your work on a separate sheet of paper.
