

APES Major Concepts Video Project

You will work in groups of up to 5 to create a 10 minute maximum (2 minute max per person) video lesson covering one of the topics from APES this school year. You will be given part of this week and next to work on this project.

You may choose to use any movie maker program that you have access to. Your project must be turned in via a YouTube or Vimeo link. Come see me if you have another internet video program that you prefer.

The majority of the video must be created by your group. Although, if you find a relevant clip that you would really like to incorporate into your video, that is fine. Be sure to cite where you got the clip in the credits at the end of your video. The bulk of your project should be your own, and not the property of someone else. All content must be school-appropriate. If you are uncertain, ask!!!

You are trying to help future APES students understand your topic. You must address the following in your video:

- A textbook definition of your concept.
- Your explanation in your own terms of what that means.
- An example further explaining your concept i.e. an acted out scene, claymation, animation, news report etc.

To be considered A worthy your video must be BOTH ENTERTAINING AND EDUCATIONAL with:

- Graphics
- Transitions
- Music
- Entertainment

If I feel that you go above and beyond extra credit can be earned on this project. The crowd needs to be impressed, educated, and entertained.
