Visi- Digestive system:

In an attempt to learn the organs of your digestive system, their location, function, and role in maintaining homeostasis you will create a diagram of the human digestive system on 11x 17 sheet of paper. The diagram must include all the major organs in their proper locations. Next you must label the organs with their proper names and type of digestion that they perform. Next to each organ, list the enzymes that made or used in that organ. Finally, pick a favorite meal, ie. A cheese burger or pizza etc... and draw it going through your digestive system. As it passes each organ you must explain the type of digestion occurring, what enzymes are being used and what's being removed/ broken down from the food.
